**APPL-DATE:** September 28, 1999

**INT-CL (IPC):** H04N005/907 , G06K017/00

**ABSTRACT:**

**PROBLEM TO BE SOLVED:** To provide a memory card reproduction display device having superior operability for one-hand operation, by which a user can easily reproduce and enjoy visual data recorded on a memory card.

**SOLUTION:** A flat outer package case 1 is provided with a display section 2 and a grip section 3. Since a display section 2 reproduces and displays data read from a semiconductor memory card inserted to a slot 5 formed to the side face of the grip section 3, the user can easily view visual data recorded in the semiconductor memory card not only at home but also at a visit place or while moving in traffic facilities such as an automobile, a train and a bus.
